ISBN 978-1-5297-4165-0 (pbk)

At SAGE we take sustainability seriously. Most of our products are printed in the UK using responsibly sourced papers and boards. When we print overseas we ensure sustainable papers are used as measured by the PREPS grading system. We undertake an annual audit to monitor our sustainability.

CONTENTS

Acknowledgments	x
How to use your book	xi
Online resources	xii
1 Introduction	1
1.1 Creating experiments	1
1.2 Building versus coding	2
1.3 Pros and cons of open-source software	4
1.4 PsychoPy and Pavlovia: An open-source funded hybrid	5
1.5 Understanding your computer	5
1.6 What is PsychoPy?	7
1.7 Getting started	8
1.8 Going further	9
1.9 Conventions of this book	9
PART I FOR THE BEGINNER	11
2 Building your first experiment	13
2.1 The Builder interface	13
2.2 Building the Stroop task	18
2.3 Define your conditions	18
2.4 Defining the trial structure	21
2.5 Adding a loop to repeat trials	26
2.6 Varying your stimuli on each trial	28
2.7 Add some instructions	31
2.8 Add a thank-you slide	33
2.9 Changing your info dialog	33
2.10 Analyze your data	35
3 Using images: A study into face perception	40
3.1 Accuracy versus reaction time	40
3.2 Testing face recognition	41
3.3 Image sizes in different units	45

3.4	Comparing inverted and correctly oriented faces	47
3.5	Additional options for images	48
3.6	Present a movie instead of an image	50
4	Timing and brief stimuli: Posner cueing	52
4.1	Presenting brief stimuli precisely	52
4.2	Posner cueing	55
5	Running studies online	66
5.1	Getting started online	68
5.2	Launching your study online	71
5.3	Using touch screen devices	74
5.4	Debugging your study online	74
5.5	Recruitment online	75
5.6	Potential issues with online studies	76
6	Creating dynamic stimuli (revealing text and moving stimuli)	79
6.1	What does <i>dynamic</i> mean and why is it useful?	79
6.2	Inserting code into parameters	81
6.3	Example 1: Revealing text gradually	82
6.4	Example 2: Spinning, expanding images	85
6.5	Example 3: Change colors through the rainbow	87
6.6	Example 4: Make a heart that has a pulse	88
6.7	Going further	90
7	Providing feedback: Simple code components	91
7.1	Providing feedback	92
7.2	Updating the feedback color	95
7.3	Reporting the reaction time	96
7.4	Ideas for useful code snippets	98
7.5	Reporting performance over the last five trials	99
7.6	Using different ‘code types’	101
8	Collecting survey data using forms	103
8.1	Setting up a form in PsychoPy	103
8.2	Categories, Likert or continuous ratings	105
8.3	Free text responses	106
8.4	Adding a button to submit form answers	108
8.5	Feedback: using responses from forms	109

9	Using sliders	112
9.1	The Müller–Lyer illusion	112
9.2	Basic Slider settings	114
9.3	Using sliders to grow/shrink stimuli	116
10	Randomizing and counterbalancing blocks of trials: A bilingual Stroop task	119
10.1	Blocking trials	119
10.2	The bilingual Stroop task	120
10.3	Build a blocked version of the Stroop task	122
11	Using the mouse for input: Creating a visual search task	133
11.1	Getting spatial responses	134
11.2	Visual search	134
11.3	Implementing the task	135
11.4	Introducing the Mouse Component	135
11.5	Control stimulus visibility from a conditions file	139
11.6	Control stimulus positions using code	139
11.7	Responding to mouse clicks spatially	145
11.8	Selectively skipping a Routine	146
11.9	Making smooth trial transitions	148
11.10	Pointing rather than clicking	149
PART II	FOR THE PROFESSIONAL	151
12	Implementing research designs with randomization	153
12.1	How can we assign subjects to conditions or groups?	154
12.2	Understanding loop ordering options	159
12.3	Summary	166
13	Coordinates and color spaces	167
13.1	Coordinate systems	167
13.2	Color spaces	173
13.3	Phase of textures	175
14	Understanding your computer timing issues	177
14.1	Does PsychoPy have sub-millisecond precision?	178
14.2	Understanding screen refresh rates	179
14.3	Testing your stimulus timing	182
14.4	Timing by screen refresh	187

14.5	Images and timing	188
14.6	Response-time precision	189
14.7	Timing in online studies	190
15	Monitors and Monitor Center	193
15.1	Computer display technology	193
15.2	Monitor Center	199
15.3	Monitor calibration	200
15.4	Spatial calibration	201
15.5	Gamma correction	201
15.6	Color calibration	208
16	Debugging your experiment	210
16.1	Warnings and alerts	210
16.2	Errors	211
16.3	Common mistakes without errors	213
16.4	How to debug an experiment	214
16.5	Writing a better query to the forum	215
17	Pro tips, tricks and lesser-known features	218
17.1	Adding a README file to your experiment	218
17.2	Expand or shrink the flow and routine	219
17.3	Copying and pasting routines and components	220
17.4	Online repositories for sharing your experiments	221
17.5	Using variables from the dialog box in your experiment	222
17.6	Controlling names of your data files and folders	223
17.7	Running in windowed mode	224
17.8	Re-creating your data files	225
17.9	Skipping a part of your experiment	225
17.10	Turn tips back on	226
PART III	FOR THE SPECIALIST	227
18	Psychophysics, stimuli and staircases	229
18.1	Gratings and Gabors	230
18.2	Smooth-edged masks (Gaussian and raised cosine)	232
18.3	Using images as masks	235
18.4	Element arrays	235
18.5	Random dot kinematograms	239
18.6	Staircase and QUEST procedures	242

19 Building an fMRI study	249
19.1 Detecting trigger pulses	249
19.2 Non-slip timing	253
19.3 How to calibrate a monitor for fMRI	254
20 Building an EEG study	257
20.1 What is special about EEG studies?	257
20.2 Sending EEG triggers	258
20.3 Communicating by parallel port or USB	258
20.4 Sending EEG triggers by network connections	260
20.5 Using custom libraries	263
21 Add eye tracking to your experiment	264
21.1 Eye tracking in Builder	264
21.2 Calibration	268
21.3 Tracking gaze position	269
21.4 Using regions of interest	270
21.5 Data storage via ioHub	272
21.6 Saving image and movie stimuli to disk	273
Appendix A Mathematics refresher	277
A.1 Sine and cosine	277
A.2 Rescaling and changing start points	279
A.3 Pythagoras' theorem	280
Appendix B Exercise solutions	281
References	290
Index	292
